Robitussin High

A ³Robitussin high² is derived from abusing Robitussin, a common cough and cold product, and when taken in recreational doses, which far exceed recommended doses, the user may experience a ³high.² This Robitussin high is caused by the excessive dose of dextromethorphan, a common ingredient found in many cough medications, including Robitussin. When such medications are abused they become a dissociative drug.* Teens often buy Robitussin because it is a recognized cough and cold brand. Also, many of the slang terms surrounding DXM abuse are spin-offs from the Robitussin brand, such as ³Robo Tripping.²
